# Ultra Grip® AMPLIFIED

# Performing for Generations to Come

www.vikingjohnson.com UltraGrip DN700 - DN900

# **Ultra Grip**®

#### **Adapting to Environmental Extremes**

Many utilities around the world are finding a need to transport water over longer distances, and especially from regions with a surplus to drought stricken ones.

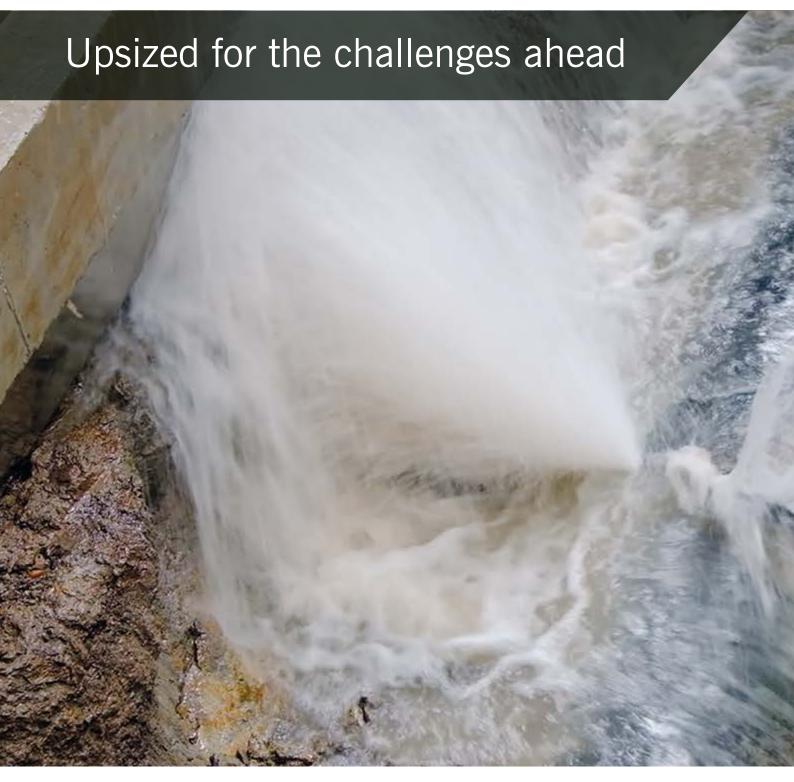

Consequently, the industry has sort more cost effective pipeline designs that utilise larger sizes and higher pressure ratings, with 16 bar becoming the standard working pressure across their networks.

vww.vikingjohnson.com UltraGrip DN700 - DN900

# UltraGrip® DN700 - DN900

#### **Unique Restraining System**

The UltraGrip restraint system is equipped with a unique sealing and gripping technology allows water utilities contractors to repair pipelines faster, without the need for external restraints, like for example thrust blocks.

#### **Wide Tolerance**

When pipes are distorted or out of round the UltraGrip's market leading 35mm tolerance provides more clearance to ensure a simple connection. The fitting can accommodate pipe distortion within the manufacturing tolerances and connects both the spigot end and mid barrel ductile iron pipe in one fitting as well as both class AB and CD cast iron.

**Accommodates pipe distortion** 

vww.vikingjohnson.com UltraGrip DN700 - DN900 7

<sup>\*</sup>UltraGrip can be used in above ground applications, where it is not exposed to direct sunlight, and falls within the 40 degrees operating temperature range (between -20 and +60).

#### For Peace of Mind

UltraGrip offers 4° angularity at each end covering the entire range including top and bottom tolerance. This feature eliminates the need for installers to measure the pipe to calculate the allowable angularity.

It also offers benefits on the design of new pipe networks as bends can be designed into the pipeline without use of specialist fittings and offers flexibility on installation covering pipe misalignment.

Viking Johnson UltraGrip

# Ease of Installation

UltraGrip is easy to install on site even in narrow trenches. Installation is made simple with lifting eyes added for ease of manoeuvrability. The product is preassembled to allow for quick positioning over the top and bottom tolerance pipe with captive studs requiring only a single spanner for tightening when dealing with tricky site conditions.

Plus after installation there is no requirement to re-torque or to revisit after initial bolt up.

#### **Exceptional Versatility for Large Scale Infrastructure Projects**

4° Angularity across the range at both ends

www.vikingjohnson.com UltraGrip DN700 - DN900

# UltraGrip° DN700 - DN900

# Focused on sustainability

#### A Renewable Resource

All UltraGrip lines are coated in Rilsan Nylon, a bio sourced coating, manufactured from a renewable raw material of castor seeds, that grows easily in semi-arid regions, causing no deforestation and not competing with food production, making it a truly renewable material.

# A Unique Bio Coating

Rilsan® powder coatings have been used in the water industry since 1967. It is a unique, high performance polyamide providing the highest degree of corrosion protection for metal parts whilst being compliant with the most demanding drinking water regulations (WRAS, KIWA etc.).

Selected not only for the coating's excellent protection against corrosion it also withstands rough high levels of deformation making it ideal for products that flex during bolt up.

Castor Scholarships

In 2022 Arkema awarded Viking Johnson one of the first Castor Scholarships as a selected global customer with a strong commitment to sustainability.

#### **Biodegradable Protective Packaging**

Protective caps have been introduced to keep the fitting clean and free from any contamination. The caps are made of biodegradable material to minimise impact to the environment and ensure fittings are clean and ready for use on potable water applications.

vww.vikingjohnson.com UltraGrip DN700 - DN900

#### **Reducing Our Carbon Footprint**

One of the core values within Crane Co. businesses is the elimination of waste throughout the organisation.

The Company also has a structured cadence and process to manage and measure progress of sustainability initiatives.

#### 2030 Targets

# Source Materials

UltraGrip is manufactured from 80% recycled steel. Utilising recycled steel uses up to 75% less energy than producing new fittings, from fresh raw materials and reduces waste by not having to extract minerals from the ground.

# Concrete Removal

A key ingredient of concrete thrust block manufacturing is Cement which contributes up to 8% of global  $\mathrm{CO}_2$  emissions. UltraGrip minimises the need for thrust blocks because the enhanced gripping design accommodates end load forces from the internal pressure within pipelines.

# Long Life Protection

UltraGrip has a 50 year design life expectancy which helps meet global climate targets in reducing carbon emissions. This minimises manufacturing, shipping, installation and repairs ensuring a better life style for generations to come.

#### **Reduce Stock Holding**

Stock holding can be kept to a minimum with careful placement of the tolerance range to cover core pipe materials.

ww.vikingjohnson.com UltraGrip DN700 - DN900

Viking Johnson UltraGrip

vww.vikingjohnson.com UltraGrip DN700 - DN900

#### **Cost Effective Pipelines**

UltraGrip restraint system is equipped with a unique gripping technology that allows consulting engineers to design more cost effective pipelines, without the need for external restraints, like for example thrust blocks.

#### **Long Term Performance**

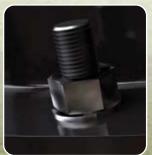

Product is third party accredited to BS8561:2021 which ensures end user confidence. When used on polyethylene pipe the product achieves a Type 2 end load performance as defined in IGN 4-01-02 (formally WIS 4-24-01) and end load performance to ISO 17885.

#### **Higher Pressures**

16 bar product as standard, to support the growing requirement for higher operating pressure pipe networks.

#### Simple to Fit

Supplied with captive studs, these can be bolted up by a technician using a single spanner making UltraGrip ideal for use in all trench conditions. Plus there is no requirement to re-torque or revisit after initial bolt-up.

# 50 Year Design Life

Along with extensive long term testing, and high performance gasket, the stainless steel bolts coated with dry film lubricant provide excellent corrosion resistance against degradation and maximises the longevity of the product.

**Increased Flexibility** 

4° angularity at each end allows bends to be designed into pipe networks and to join misaligned pipes in the ground.

### DN700 - DN900

#### No Leakages

A proven, high performance wide tolerance, EPDM gasket technology which Viking Johnson has been using in their products for the water industry over the last 40 years.

#### **Connects Various Pipe Materials**

A 35mm tolerance ensures one size fits multiple pipe materials, and designed to allow for use on out of round and out of specification pipe.

Large setting gaps allow operative bigger tolerances for cutting and positioning pipes making it quicker and easier when undertaking repairs.

#### **Ease of Handling**

Installation made simple with incorporated lifting eyes for ease of manoeuvrability.

## DN700 - DN900

#### **Extensive Testing & Quality Endorsements**

Viking Johnson products undergo vigorous testing regimes to ensure a long life, these includes finite element analysis (ANSYS) as well as extensive testing witnessed by third party test houses to verify compliance with the long term testing as defined in BS8561:2021, when used on Ductile Iron, Steel, PE, MOPVC, Cast Iron, and Asbestos Cement. For PE UltraGrip fittings also achieve an axial end load equivalent of a Type 2 performance as defined and tested by IGN 4-01-02:2017.

In addition, the performance has been validated through extensive physical testing, including hydrostatic, pull-out, leak tightness, strength and resistance to distortion tests. Furthermore, pressure tests with shear load have been carried out on grooved pipe, to simulate typical corrosion and ground loading found in old pipelines.

Also the products can mobilise restraint and seal effectively in all situations, giving installers and end users confidence the products will perform.

# **Demonstration Centre**

As part of the development of the UltraGrip range and for an enhanced customer experience, Viking Johnson has invested in a new Demonstration Centre.

The Centre enables simulations of real trench like conditions whilst testing product under pressure with both tensile and hydrostatic assessments. All the water used in these tests is provided by a sustainable rainwater harvesting system.

So, customers, contractors and technicians wishing to learn more about UltraGrip, can visit the Centre, view and handle the product whilst receiving essential hands on training.

UltraGrip is compliant with the industry standards as confirmed with WRc certification, which offers peace of mind and verifies the 50 years design life expectancy.

All water contact materials used in UltraGrip are approved for use with potable water; the gaskets are WRAS approved and the Rilsan Nylon coating has both WRAS and DWI certification.

# ISE Valley & UltraGrip Amplified

Viking Johnson UltraGrip Amplified DN700's have been specified and installed at Stanton Cross on a new housing development near Wellingborough to repair an existing sewage mains which burst over the Christmas period in 2022. As a temporary measure 540 metres of overground piping was installed to handle the sewage while repairs were made to the existing 1970's pipe network.

Four Viking Johnson UltraGrip Amplified DN700 flange adaptors were chosen by Anglian Water One Alliance for the project to rejoin corroded ductile iron pipe sections where the pipe network on the estate changes direction.

UltraGrip is ideal for this type of work, and easily met the requirements for the 6 bar pipework rating for this repair project and as it is a restrained fitting allowed the contractor to remove and not replace expensive thrust blocks. The installation was also quick and easy.

It has worked perfectly. There is a cost benefit of course, we would have been thrust blocking - time saved us probably a week plus a lot smaller excavation. Also our carbon footprint is a lot lower. This joint is perfect, worked lovely, it's all gone to plan.

For the full installation details and to ensure correct fitting, please refer to the UltraGrip DN700 DN800 installation instructions.

#### Temperature rating of product

Operating temperature -20°C to +60°C

#### Support liners - PE and MOPVC pipes

A close fit Viking Johnson support liner is required when used on:

➤ All PE pipes

DN700 - DN800

> MOPVC pipes

#### Use of restrained couplings on exposed pipework

UltraGrip can be used in above ground applications, so long as the pipework is supported, it is not exposed to direct sunlight and falls within the  $40^{\circ}$ C operating temperature range (between -20°C and +60°C).

#### **Approvals**

The following water contact materials used in UltraGrip are approved for use with potable water:-

Rilsan Nylon 11:

> WRAS, DVGW, W270, ACS & KIWA

Gasket (EPDM):

> WRAS, W270

#### **Finished Product:**

BS8561; WRc certification verifying that the product complies with BS8561 (Specification for mechanical fittings for use in the repair, connection and renovation of pressurized water supply pipelines — Requirements and test methods).

Polyethylene Pipe Pull Out Performance; WRc certification confirming on PE a Type 2 end load performance (defined in IGN 4-01-02:2017 [N3]) when tested in accordance with the method given in BS EN ISO 3501.

Fastener et Engagement)	M20	190-210	190-210	190-210
l Fastener Grippers)	M16	190-210	140-150	110-120

For the full installation details and to ensure correct fitting, please refer to the UltraGrip DN900 installation instructions.

#### Temperature rating of product

Operating temperature -20°C to +60°C

#### Support liners - PE

A close fit Viking Johnson support liner is required when used on:

> All PE pipes

#### Use of restrained couplings on exposed pipework

UltraGrip can be used in above ground applications, so long as the pipework is supported, it is not exposed to direct sunlight and falls within the 40°C operating temperature range (between -20°C and +60°C).

#### **Approvals**

The following water contact materials used in UltraGrip are approved for use with potable water:-

Rilsan Nylon 11:

> WRAS, DVGW, W270, ACS & KIWA

Gasket (EPDM):

> WRAS, W270

#### Materials & Relevant Standards

#### 1) Square Bush Nut

Cast stainless steel to ASTM A487/A487M-21, Grade CA6NM Class A

#### 2) Bolts

Stainless steel to BS EN ISO 3506-1 Grade A4-80

#### 2) Nuts

Stainless steel - BS1449:PT2 ISO 3506-1 Grade A4-80

#### 2) Washers

Stainless steel - BS1449:PT2 ISO 3506-1 Grade A4-50

#### 3) End Rings 4) Centre Sleeve

Mild steel to BS EN10025 Grade S355

#### 5) Flange Ring

S275 Mild Steel to BS EN 10025-2

#### Gripper

Stainless steel (Cast) PH 17-4 H925 to BS EN 10088-1

#### 7) Gasket

EPDM to BS EN 681-1

#### 8) Studs

Stainless steel - BS EN ISO 3506-1 Grade A4-80

#### Coatings

# **CASE STUDY**

# Nimes Metropole Mains Upgrade - UltraGrip Amplified

Viking Johnson UltraGrip Amplified was selected by Eau de Nimes Metropole to support the work of installing a new flow meter to collect water consumption data for analysis to locate leaks and minimising water loss in their network, something that is critical to all utilities in their drive to conserve water and save costs.

The water utility Eau de Nimes Metropole is part of the Veolia group and covers 39 municipalities serving a population of 260.000 people in Southern France. Aliaxis depot in Mèze, Viking Johnsons channel partner in France delivered the product to the water authority.

Viking Johnson supplied two UltraGrip Amplified DN800 flange adaptors and four UltraGrip DN500 flange adaptors for use in the modification to the network, which had to be completed over a two week period coinciding with a school shut down. The large excavation trench was actually located immediately outside the school gates!

The DN800 cast iron main, which is over 150 years old dating back to 1872, runs at a maximum of 7 bar and due to its size and weight had to be cut and removed in two pieces. Viking Johnson had no reservations about offering their new Amplified UltraGrip for this pipe material, as their extensive testing program included both the new pipe materials like Ductile Iron, Steel, PE, and MOPVC, but also a specially manufactured section grey cast iron pipe. The two DN800 UltraGrip Amplified flange adaptors were pre-fitted to reducers used to step down the pipe to DN500 for lowering into the trench and on one end a gate valve was then installed to control water flow as and when required. Installation was made easy from both the lifting eye on the Amplified UltraGrip assisting in the handling of the fittings along with the wide tolerance of the fitting providing good clearance when offering up to the existing pipe. Finally, four DN500 UltraGrip flange adaptors were used to connect the new sections of ductile iron pipe located up and downstream of the flow meter, which completed the modifications to the network.

While Eau de Nimes have used the smaller size UltraGrip couplings and flange adaptors on previous projects and been pleased with the reliable performance along with how easy they are to fit, this was the first time they had installed the new larger diameter DN800 UltraGrip Amplified fittings. The significant advantages of UltraGrip are they connect many different pipe materials, offer a wide tolerance that allows for some variation in the outside diameter of the pipe and the restraining mechanism accommodates the end load forces due to internal pressure in pipelines.

Mathieu Berart, who is responsible for the water network performance at Nimes Metropole Water Utility said

We will now be able to understand water flow during the day and at night a lot better. The installation team decided to use a Viking Johnson solution taking into consideration space constraints on site and the need for tolerance to accommodate the pipe outside diameter. It is a lot more practical to use a solution offering a wide tolerance when working on such a critical project.
